Title: High Definition Video Processors for Endoscopy: Clinical Effectiveness

Date: 26 November 2007

Research question:

What is the evidence that high definition video processors can detect pathologies earlier than standard video processors in patients undergoing endoscopic procedures?

Methods:

A limited literature search was conducted on key health technology assessment resources, including PubMed, the Cochrane Library (Issue 2, 2007), University of York Centre for Reviews and Dissemination (CRD) databases, ECRI, EuroScan, international HTA agencies, and a focused Internet search. Results include articles published between 2002 and the present, and are limited to English language publications only. Filters were applied to limit the retrieval to systematic reviews/HTA, economic, randomized controlled trial (RCT) and observational studies. Internet links are provided, where available.

Results:

Health technology assessments

No literature found

Systematic reviews and meta-analyses

No literature found
Randomized controlled trials

   PubMed: PM17631129

Observational studies

   PubMed: PM17623492
