Title: Isolette Transfer of Premature Infants: Guidelines

Date: 7 July 2008

Research question:

What are the guidelines for the transfer of premature infants from an isolette?

Methods:

A limited literature search was conducted on key health technology assessment resources, including PubMed, the Cochrane Library (Issue 2, 2008), University of York Centre for Reviews and Dissemination (CRD) databases, ECRI, EuroScan, international HTA agencies, and a focused Internet search. Results include articles published between 2003 and July 2008 and are limited to English language publications only. No filters were used to limit the results by study type. Internet links are provided, where available.

Results:

HTIS reports are organized so that the higher quality evidence is presented first. Therefore, health technology assessment reports, systematic reviews and meta-analyses are presented first. These are followed by randomized controlled trials, observational studies and evidence-based guidelines.

The literature search identified two systematic reviews, one randomized controlled trial, one observational study, and one guideline. No health technology assessments were identified.

Health technology assessments

No literature identified

Systematic reviews and meta-analyses

**Randomized controlled trials**

**Observational studies**

**Guidelines and recommendations**
