TITLE: Propofol and Driving Restrictions: Guidelines

DATE: 27 November 2008

RESEARCH QUESTION:
What are the guidelines for the time before driving following propofol administration?

METHODS:
A limited literature search was conducted on key health technology assessment resources, including Ovid’s Medline, the Cochrane Library (Issue 4, 2008), University of York Centre for Reviews and Dissemination (CRD) databases, ECRI, EuroScan, international health technology agencies, and a focused Internet search. Results include articles published between 2003 and November 2008, and are limited to English language publications only. No filters were applied to limit the retrieval by study type. Internet links are provided, where available.

RESULTS:
HTIS reports are organized so that the higher quality evidence is presented first. Therefore, health technology assessment reports, systematic reviews, and meta-analyses are presented first. These are followed by randomized controlled trials, observational studies, and evidence-based guidelines.

One randomized controlled trial and one observational study regarding the time before driving following propofol administration were identified. No relevant health technology assessments, systematic review, meta-analyses, or evidence-based guidelines were identified.

Health technology assessments
No literature identified

Systematic reviews and meta-analyses
No literature identified
Randomized controlled trials

Observational studies

Guidelines and recommendations

No literature identified
