Title: Quetiapine for Agitation and Aggression in Dementia

Date: August 15, 2007

Research question: What is the clinical effectiveness and safety (adverse events) of quetiapine for aggression and agitation in dementia patients compared to risperidone?

Methods: A literature search was conducted on key health technology assessment resources, including PubMed, The Cochrane Library (Issue 2, 2007), University of York Centre for Reviews and Dissemination (CRD) databases, ECRI’s HTAIS, EuroScan, international HTA agencies, and a focused Internet search. Results include English language publications from 2002 to date. Links to online full-text or abstracts are provided when available.

Results:

Systematic reviews / Meta-analyses

**Randomized controlled trials**
