TITLE: Nursing Hours Per Patient Day for Pediatric and Maternal Health: Guidelines

DATE: 04 April 2011

RESEARCH QUESTION

What are the evidence-based guidelines and recommendations regarding optimal nursing hours per patient day for maternal and pediatric patients?

KEY MESSAGE

No information was identified regarding guidelines and recommendations for optimal nursing hours per patient day for maternal and pediatric patients.

METHODS

A limited literature search was conducted on key resources including PubMed, CINAHL, The Cochrane Library (2011, Issue 3), University of York Centre for Reviews and Dissemination (CRD) databases, Canadian and major international health technology agencies, as well as a focused Internet search. No filters were applied to limit the retrieval by study type. The search was limited to English language documents published between Jan 1, 2006 and Mar 30, 2011. Internet links were provided, where available.

RESULTS

Rapid Response reports are organized so that the higher quality evidence is presented first. Therefore, health technology assessment reports, systematic reviews, and meta-analyses are presented first. These are followed by evidence-based guidelines.

No relevant health technology assessments, systematic reviews, meta-analyses, or evidence-based guidelines were identified regarding optimal nursing hours per patient day for maternal and pediatric patients. Additional articles of potential interest can be found in the appendix.

Health technology assessments

No literature identified.

Disclaimer: The Rapid Response Service is an information service for those involved in planning and providing health care in Canada. Rapid responses are based on a limited literature search and are not comprehensive, systematic reviews. The intent is to provide a list of sources of the best evidence on the topic that CADTH could identify using all reasonable efforts within the time allowed. Rapid responses should be considered along with other types of information and health care considerations. The information included in this response is not intended to replace professional medical advice, nor should it be construed as a recommendation for or against the use of a particular health technology. Readers are also cautioned that a lack of good quality evidence does not necessarily mean a lack of effectiveness particularly in the case of new and emerging health technologies, for which little information can be found, but which may in future prove to be effective. While CADTH has taken care in the preparation of the report to ensure that its contents are accurate, complete and up to date, CADTH does not make any guarantee to that effect. CADTH is not liable for any loss or damages resulting from use of the information in the report.
