TITLE: Post-Operative Removal of Surgical Dressings: Clinical Evidence and Guidelines

DATE: 24 September 2014

RESEARCH QUESTIONS

1. What is the clinical evidence regarding the timing of removal and/or replacement of surgical dressings after laparoscopic or arthroscopic surgeries?

2. What are the evidence-based guidelines regarding the removal and/or replacement of surgical dressings after laparoscopic or arthroscopic surgeries?

KEY FINDINGS

One randomized controlled trial was identified regarding the post-operative removal of surgical dressings.

METHODS

A limited literature search was conducted on key resources including PubMed, The Cochrane Library (2014, Issue 9), University of York Centre for Reviews and Dissemination (CRD) databases, Canadian and major international health technology agencies, as well as a focused Internet search. No filters were applied to limit the retrieval by study type. The search was also limited to English language documents published between January 1, 2009 and September 22, 2014. Internet links were provided, where available.

SELECTION CRITERIA

One reviewer screened citations and selected studies based on the inclusion criteria presented in Table 1.

Disclaimer: The Rapid Response Service is an information service for those involved in planning and providing health care in Canada. Rapid responses are based on a limited literature search and are not comprehensive, systematic reviews. The intent is to provide a list of sources of the best evidence on the topic that CADTH could identify using all reasonable efforts within the time allowed. Rapid responses should be considered along with other types of information and health care considerations. The information included in this response is not intended to replace professional medical advice, nor should it be construed as a recommendation for or against the use of a particular health technology. Readers are also cautioned that a lack of good quality evidence does not necessarily mean a lack of effectiveness particularly in the case of new and emerging health technologies, for which little information can be found, but which may in future prove to be effective. While CADTH has taken care in the preparation of the report to ensure that its contents are accurate, complete and up to date, CADTH does not make any guarantee to that effect. CADTH is not liable for any loss or damages resulting from use of the information in the report.

RESULTS

Rapid Response reports are organized so that the higher quality evidence is presented first. Therefore, health technology assessment reports, systematic reviews, and meta-analyses are presented first. These are followed by randomized controlled trials, non-randomized studies, and evidence-based guidelines.

One randomized controlled trial was identified regarding the post-operative removal of surgical dressings. No relevant health technology assessment reports, systematic reviews, meta-analyses, non-randomized studies or evidence-based guidelines were identified.

Additional references of potential interest are provided in the appendix.

Health Technology Assessments
No literature identified.

Systematic Reviews and Meta-analyses
No literature identified.

Randomized Controlled Trials

Non-Randomized Studies
No literature identified.

Guidelines and Recommendations
No literature identified.

APPENDIX – FURTHER INFORMATION:

Systematic Reviews - Type of Surgery not Specified

Non-Randomized Studies – Unclear if Surgery is Arthroscopic or Laparoscopic

Guidelines and Recommendations – Prior to 2009

Guidelines – Best Practice Recommendations
