TITLE: Essential Oil Products for Disinfection: Clinical Effectiveness, Cost-Effectiveness, and Guidelines

DATE: 04 September 2014

RESEARCH QUESTIONS

1. What is the clinical effectiveness of essential oil products for the disinfection of skin or wounds?

2. What is the clinical effectiveness of essential oil products for the disinfection of hospital surfaces?

3. What is the cost-effectiveness of essential oil products for the disinfection of skin, wounds, or hospital surfaces?

4. What are the evidence-based guidelines regarding the use of essential oil products for the disinfection of skin wounds, or hospital surfaces?

KEY FINDINGS

No relevant literature was found regarding the clinical and cost-effectiveness of essential oil products for the disinfection of skin, wounds, or hospital surfaces.

METHODS

A limited literature search was conducted on key resources including PubMed, The Cochrane Library (2014, Issue 8), University of York Centre for Reviews and Dissemination (CRD) databases, Canadian and major international health technology agencies, as well as a focused Internet search. Methodological filters were applied to limit retrieval to health technology assessments, systematic reviews, meta-analyses, randomized controlled trials, non-randomized studies, economic studies, and guidelines. Where possible, retrieval was limited to the human population. The search was also limited to English language documents published between January 1, 2009 and August 20, 2014. Internet links were provided, where available.

Disclaimer: The Rapid Response Service is an information service for those involved in planning and providing health care in Canada. Rapid responses are based on a limited literature search and are not comprehensive, systematic reviews. The intent is to provide a list of sources of the best evidence on the topic that CADTH could identify using all reasonable efforts within the time allowed. Rapid responses should be considered along with other types of information and health care considerations. The information included in this response is not intended to replace professional medical advice, nor should it be construed as a recommendation for or against the use of a particular health technology. Readers are also cautioned that a lack of good quality evidence does not necessarily mean a lack of effectiveness particularly in the case of new and emerging health technologies, for which little information can be found, but which may in future prove to be effective. While CADTH has taken care in the preparation of the report to ensure that its contents are accurate, complete and up to date, CADTH does not make any guarantee to that effect. CADTH is not liable for any loss or damages resulting from use of the information in the report.

Copyright: This report contains CADTH copyright material and may contain material in which a third party owns copyright. This report may be used for the purposes of research or private study only. It may not be copied, posted on a web site, redistributed by email or stored on an electronic system without the prior written permission of CADTH or applicable copyright owner.

Links: This report may contain links to other information available on the websites of third parties on the Internet. CADTH does not have control over the content of such sites. Use of third party sites is governed by the owners’ own terms and conditions.
The summary of findings was prepared from the abstracts of the relevant information. Please note that data contained in abstracts may not always be an accurate reflection of the data contained within the full article.

SELECTION CRITERIA

<table>
<thead>
<tr>
<th>Table 1: Selection Criteria</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Population</strong></td>
</tr>
<tr>
<td><strong>Intervention</strong></td>
</tr>
</tbody>
</table>
| **Comparator** | Q1: other skin/wound disinfectants (e.g., chlorhexidine soap)  
| | Q2: other surface disinfectants (e.g., PerCept RTU, Accel PREVention RTU) |
| **Outcomes** | Effectiveness for the eradication of Methicillin-resistant Staphylococcus aureus (MRSA), Vancomycin-resistant Enterococci (VRE), Extended Spectrum Beta Lactamase (ESBL), prevention of infection transmission, cost-effectiveness, guidelines |
| **Study Designs** | Health technology assessment reports, systematic reviews, meta-analyses, randomized controlled trials, economic evaluations, non-randomized studies, evidence-based guidelines |

RESULTS

Rapid Response reports are organized so that the higher quality evidence is presented first. Therefore, health technology assessment reports, systematic reviews, and meta-analyses are presented first. These are followed by randomized controlled trials, non-randomized studies, economic evaluations, and evidence-based guidelines.

No relevant health technology assessment reports, systematic reviews, meta-analyses, randomized controlled trials, non-randomized studies, economic evaluations, or evidence-based guidelines regarding the clinical and cost-effectiveness of essential oil products for the disinfection of skin, wounds, or hospital surfaces were identified.

References of potential interest are provided in the appendix.

OVERALL SUMMARY OF FINDINGS

No relevant literature was found regarding the clinical and cost-effectiveness of essential oil products for the disinfection of skin, wounds, or hospital surfaces, therefore no summary can be provided.
