The strategy was evaluated, and the results described all the steps of the knowledge transfer process. The study evaluated how the leaflet and clinical brief were received and their impact on the decision-making process of the patient-gynecologist microsystem. The evaluation was based on the quantity and quality of the interactions between the researcher, the AOGQ, and the gynecologists. The leaflet was validated by the AOGQ and gynecologists, and the clinical brief was distributed to the gynecologists. The researchers conducted interviews to confirm the effectiveness of the knowledge transfer strategy. The interviews showed that the leaflet and clinical brief were useful in modifying treatment options. The results of the study are expected to contribute to the development of a knowledge transfer strategy in the field of gynecology.
