About CADTH: CADTH is an independent, not-for-profit organization responsible for providing Canada's health care decision-makers with objective evidence to help make informed decisions about the optimal use of drugs, medical devices, diagnostics, and procedures in our health care system.

Funding: CADTH receives funding from Canada's federal, provincial, and territorial governments, with the exception of Quebec.

Key Messages

- No evidence was identified regarding the diagnostic accuracy of human leukocyte antigen B27 testing for the detection of spondyloarthropathy in patients with low back pain and no other symptoms.
- No evidence was identified regarding the clinical effectiveness of human leukocyte antigen B27 testing for the detection of spondyloarthropathy in patients with low back pain and no other symptoms.
- No evidence-based guidelines were identified regarding human leukocyte antigen B27 testing for the detection of spondyloarthropathy in patients with low back pain and no other symptoms.

Research Questions

1. What is the diagnostic accuracy of human leukocyte antigen B27 testing for the detection of spondyloarthropathy in patients with low back pain and no other symptoms?
2. What is the clinical effectiveness of human leukocyte antigen B27 testing for the detection of spondyloarthropathy in patients with low back pain and no other symptoms?
3. What are the evidence-based guidelines for human leukocyte antigen B27 testing for the detection of spondyloarthropathy in patients with low back pain and no other symptoms?

Methods

Literature Search Methods

This report is an update of a literature search strategy developed for a previous CADTH report.¹ For the current report, a limited literature search was conducted on key resources including MEDLINE, the Cochrane Database of Systematic Reviews, the international HTA database, Canadian and major international health technology agencies, as well as a focused internet search. No filters were applied to limit the retrieval by study type. The initial search was limited to English-language documents published between January 1, 2010 and March 6, 2015. For the current report, database searches were rerun on January 12, 2021 to capture any articles published since the initial search date. The search of major health technology agencies was also updated to include documents published since March 2015.

Selection Criteria and Summary Methods

One reviewer screened literature search results (titles and abstracts) and selected publications according to the inclusion criteria presented in Table 1. Full texts of study publications were not reviewed. The Overall Summary of Findings section was based on information available in the abstracts of selected publications. Open-access full-text versions of evidence-based guidelines were reviewed when abstracts were not available and relevant recommendations were summarized.

Table 1: Selection Criteria

Criteria	Description
Population	Patients with low back pain and no symptoms of spondyloarthropathy (inflammatory back pain \geq 3 months duration with age of onset < 45 years, peripheral synovitis, enthesitis, dactylitis, psoriasis, or uveitis)
Intervention	Human leukocyte antigen B27 testing
Comparator	Other tests, testing when symptoms are present
Outcomes	Q1: Diagnostic accuracy (e.g., sensitivity, specificity) Q2: Clinical effectiveness (benefits and harms [e.g., false-positives, false-negatives]) Q3: Recommendations regarding the use of human leukocyte antigen B27 in patients with low back pain and no symptoms of spondyloarthropathy
Study designs	Health technology assessments, systematic reviews, randomized controlled trials, non-randomized studies, evidence-based guidelines

Results

No health technology assessments, systematic reviews, randomized controlled trials, or non-randomized studies were identified regarding the diagnostic accuracy or clinical effectiveness of human leukocyte antigen B27 testing for the detection of spondyloarthropathy in patients with low back pain and no other symptoms. Additionally, no evidence-based guidelines were identified regarding human leukocyte antigen B27 testing for the detection of spondyloarthropathy in patients with low back pain and no other symptoms.

References of potential interest that did not meet the inclusion criteria are provided in Appendix 1.

Overall Summary of Findings

No relevant literature was found regarding the diagnostic accuracy or clinical effectiveness of human leukocyte antigen B27 testing for the detection of spondyloarthropathy in patients with low back pain and no other symptoms. Therefore, no summary can be provided. Additionally, no relevant evidence-based guidelines were found regarding human leukocyte antigen B27 testing for the detection of spondyloarthropathy in patients with low back pain and no other symptoms. Therefore, no summary can be provided.

References

Health Technology Assessments

No literature was identified.

Systematic Reviews and Meta-analyses

No literature was identified.

Randomized Controlled Trials

No literature was identified.

Non-Randomized Studies

No literature was identified.

Guidelines and Recommendations

No literature was identified.
