TITLE: Ultrasound for the Management of Calcific Tendonitis in Adults: Clinical Effectiveness and Guidelines for Use

DATE: 08 January 2009

RESEARCH QUESTIONS:

1. What is the clinical effectiveness of ultrasound for the management of calcific tendonitis in adult patients?

2. What are the guidelines for the use of ultrasound in the management of calcific tendonitis in adult patients?

METHODS:

A limited literature search was conducted on key health technology assessment resources, including PubMed, the Cochrane Library (Issue 4, 2008), University of York Centre for Reviews and Dissemination (CRD) databases, ECRI, EuroScan, international health technology agencies, and a focused Internet search. Results include articles published between 1996 and January 2009, and are limited to English language publications only. Filters were applied to limit the retrieval to systematic reviews, health technology assessments, meta-analyses, guidelines, and randomized controlled trials. An additional literature search for non-randomized trials published between 2003 and January 2009 was also conducted. Internet links are provided, where available.

RESULTS:

The literature search identified one systematic review, two randomized controlled trials, one observational study, and two guidelines on ultrasound for calcific tendonitis. No health technology assessments or controlled clinical trials were identified. Additional articles of potential interest are included in the appendix.

HTIS reports are organized so that the higher quality evidence is presented first. Therefore, health technology assessment reports, systematic reviews, and meta-analyses are presented first. These are followed by randomized controlled trials, controlled clinical trials, observational studies, and evidence-based guidelines.

Disclaimer: The Health Technology Inquiry Service (HTIS) is an information service for those involved in planning and providing health care in Canada. HTIS responses are based on a limited literature search and are not comprehensive, systematic reviews. The intent is to provide a list of sources of the best evidence on the topic that CADTH could identify using all reasonable efforts within the time allowed. HTIS responses should be considered along with other types of information and health care considerations. The information included in this response is not intended to replace professional medical advice, nor should it be construed as a recommendation for or against the use of a particular health technology. Readers are also cautioned that a lack of good quality evidence does not necessarily mean a lack of effectiveness particularly in the case of new and emerging health technologies, for which little information can be found, but which may in future prove to be effective. While CADTH has taken care in the preparation of the report to ensure that its contents are accurate, complete and up to date, CADTH does not make any guarantee to that effect. CADTH is not liable for any loss or damages resulting from use of the information in the report.

Health technology assessments
No literature identified.

Systematic reviews and meta-analyses

Randomized controlled trials

Controlled clinical trials
No literature identified.

Observational studies

Guidelines and recommendations
