Title: Patient Administered Urine and Blood Ketone Testing: Clinical Effectiveness

Date: Oct. 19, 2007

Research question:

How does patient administered urine ketone testing compare to patient administered blood ketone testing for patients with type 1 diabetes?

Methods:

A limited literature search was conducted on key health technology assessment resources, including Medline (using the OVID interface), EMBASE, the Cochrane Library (Issue 3, 2007), University of York Centre for Reviews and Dissemination (CRD) databases, ECRI, EuroScan, international HTA agencies, and a focused Internet search. Results include articles published between 2002 and the present, and are limited to English language publications only. No filters were applied to limit the retrieval by study type. Internet links are provided, where available.

Results:

Health technology assessments

No literature identified

Systematic reviews and meta-analyses

No literature identified
Randomized controlled trials
