Title: The Use of Tomography for Delivery of Radiotherapy

Date: 05 December 2007

Research question:
What is the evidence that tomography can be used to deliver radiotherapy for cancer patients?

Methods:
A limited literature search was conducted on key health technology assessment resources, including PubMed, the Cochrane Library (Issue 4, 2007), University of York Centre for Reviews and Dissemination (CRD) databases, ECRI, EuroScan, international HTA agencies, and a focused Internet search. Results include articles published between 2002 and the present, and are limited to English language publications only. Filters were applied to limit the retrieval to systematic reviews, meta-analyses, health technology assessments, guidelines, randomized controlled trials. Internet links are provided, where available.

Results:
Two health technology assessments and five observational studies were identified from the literature search results. No systematic reviews, meta-analyses, randomized controlled trials or guidelines were identified.

Health technology assessments

**Systematic reviews and meta-analyses**
No literature identified

**Randomized controlled trials**
No literature identified

**Observational studies**

**Guidelines and recommendations**
No literature identified
