TITLE: Intensive Short Term Dynamic Psychotherapy In Adult Patients With Any Psychiatric Diagnosis: Clinical and Cost-Effectiveness, Safety, and Guidelines

DATE: 18 February 2016

RESEARCH QUESTIONS

1. What is the clinical effectiveness of intensive short term dynamic psychotherapy in adult patients with any psychiatric diagnosis in any setting?

2. What is the cost-effectiveness of intensive short term dynamic psychotherapy in adult patients with any psychiatric diagnosis in any setting?

3. What are the evidence-based guidelines surrounding the use of intensive short term dynamic psychotherapy?

KEY FINDINGS

Five systematic reviews and meta-analyses, three randomized controlled trials, five non-randomized studies, five economic evaluations, and one evidence-based guideline were identified regarding the clinical and cost-effectiveness, safety, and guidelines of intensive short term dynamic psychotherapy in adult patients with any psychiatric diagnosis.

METHODS

A limited literature search was conducted on key resources including PubMed, OVID, The Cochrane Library, University of York Centre for Reviews and Dissemination (CRD) databases, Canadian and major international health technology agencies, as well as a focused Internet search. No filters were applied to limit retrieval by publication type. Where possible, retrieval was limited to the human population. The search was also limited to English language documents published between January 1, 2011 and February 11, 2016. Internet links were provided, where available.

Disclaimer: The Rapid Response Service is an information service for those involved in planning and providing health care in Canada. Rapid responses are based on a limited literature search and are not comprehensive, systematic reviews. The intent is to provide a list of sources of the best evidence on the topic that CADTH could identify using all reasonable efforts within the time allowed. Rapid responses should be considered along with other types of information and health care considerations. The information included in this response is not intended to replace professional medical advice, nor should it be construed as a recommendation for or against the use of a particular health technology. Readers are also cautioned that a lack of good quality evidence does not necessarily mean a lack of effectiveness particularly in the case of new and emerging health technologies, for which little information can be found, but which may in future prove to be effective. While CADTH has taken care in the preparation of the report to ensure that its contents are accurate, complete and up to date, CADTH does not make any guarantee to that effect. CADTH is not liable for any loss or damages resulting from use of the information in the report.

RESULTS

Rapid Response reports are organized so that the higher quality evidence is presented first. Therefore, health technology assessment reports, systematic reviews, and meta-analyses are presented first. These are followed by randomized controlled trials, non-randomized studies, economic evaluations, and evidence-based guidelines.

Five systematic reviews and meta-analyses, three randomized controlled trials, five non-randomized studies, five economic evaluations, and one evidence-based guideline were identified regarding the clinical and cost-effectiveness, safety, and guidelines of intensive short term dynamic psychotherapy in adult patients with any psychiatric diagnosis. No health technology assessments were identified.
