TITLE: Telehealth Delivery of Nutritional Counselling for the Management of Chronic Diseases that Require Dietary Changes: Clinical Effectiveness and Evidence-Based Guidelines

DATE: 18 June 2015

RESEARCH QUESTIONS

1. What is the clinical effectiveness of the use of telehealth for the delivery of nutritional counselling for the management of chronic diseases that require dietary changes?

2. What are the evidence-based guidelines regarding the use of telehealth for the delivery of nutritional counselling for the management of chronic diseases that require dietary changes?

KEY FINDINGS

Seven systematic reviews, 21 randomized controlled trials, 10 non-randomized studies, and one evidence-based guideline were identified regarding the clinical effectiveness of the use of telehealth for the delivery of nutritional counseling for the management of chronic diseases that require dietary changes.

METHODS

A limited literature search was conducted on key resources including PubMed, CINAHL, The Cochrane Library, University of York Centre for Reviews and Dissemination (CRD) databases, Canadian and major international health technology agencies, as well as a focused Internet search. Methodological filters were applied to limit retrieval to health technology assessments, systematic reviews, meta-analyses, randomized controlled trials, non-randomized studies, and guidelines. Where possible, retrieval was limited to the human population. The search was also limited to English language documents published between January 1, 2010 and June 9, 2015. Internet links were provided, where available.
SELECTION CRITERIA

One reviewer screened citations and selected studies based on the inclusion criteria presented in Table 1.

RESULTS

Rapid Response reports are organized so that the higher quality evidence is presented first. Therefore, health technology assessment reports, systematic reviews, and meta-analyses are presented first. These are followed by randomized controlled trials, non-randomized studies, and evidence-based guidelines.

Seven systematic reviews, 21 randomized controlled trials, 10 non-randomized studies and one evidence-based guideline were identified regarding the clinical effectiveness of the use of telehealth for the delivery of nutritional counseling for the management of chronic diseases that require dietary changes. No relevant health technology assessments were identified.

Additional references of potential interest are provided in the appendix.

Health Technology Assessments
No literature identified.
